

Clean and conserving fuel. Fluid management solutions for prominent off-highway manufacturers.

The latest exhaust emission standard lowers the pollutant limits for agricultural and construction machinery dramatically. Even today, innovative filtration solutions engineered by Hengst help save fuel and lower emissions.

Fluid management module

- Fluid management module made of aluminum including heat exchanger and water pump
- Available with two different Energetic filter inserts (maintenance interval of 500h/1 000h)
- Mechanical valves for regulating the oil volume flow

Deutz TCD 4.1/6.1 Agri |
e.g. Fendt Vario series 500, 700, and 800

Blue.maxx fuel filter system

- Intelligent design with integrated water collection area
- Flexible installation thanks to various connection options and simple maintenance
- Environmentally compatible service thanks to filter insert Energetic®

The clever modular systems in various performance classes

Comprehensive selection. More than 1,000 filters.

Service part selection with OE quality | Oil filters | Fuel filters | Air filters | Cabin air filters | Hydraulic filters | Special applications | for agricultural and construction machinery

Our constantly growing portfolio covers all types of engines commonly used for agricultural and construction machinery. We keep a permanent stock of more than 1,000 different filter types. As filter professionals, we provide an extensive selection that is sure to offer the right solution for all your filter needs. As comprehensible as it is comprehensive: Hengst's highly advanced online catalog makes it a breeze to find the right filter and the dealer that is closest to you - not least thanks to the built-in route planner.

Agricultural and construction machinery

The SMART Alternative.

Service part selection for agricultural and construction machinery in OE quality.

The SMART Alternative. High-performance filters with OE quality.

Oil filters – Wherever clean oil is essential.

No engine can perform at its maximum capacity for long without top-of-the-line lubrication. Thanks to their great dirt absorption capacity and ability to filter out even the finest particles, Hengst's oil filters make a major contribution to reducing wear and damage on engine components.

Fuel filters – Everything hinges on clean fuel.

Contaminated fuel is a particularly grievous problem in the off-highway sector. Hengst fuel filters separate water and provide effective protection against contamination in the fuel. They thereby keep the engine and the injection system safely protected against corrosion and failure.

Air filters – Give your engine a breather.

Dusty operating conditions are nothing unusual for off-highway vehicles. Superior levels of dirt separation efficiency combined with an excellent dust holding capacity prevent any drops in performance and ensure highly efficient and dependable cleaning of the intake air.

Hydraulic filters – Pressure-resistant under all types of conditions.

Whether they need a spin-on filter or filter insert: Machine operators can expect reduced downtime and repair costs thanks to the targeted filtration of metal particles, dust and slag delivered by our hydraulic filters.

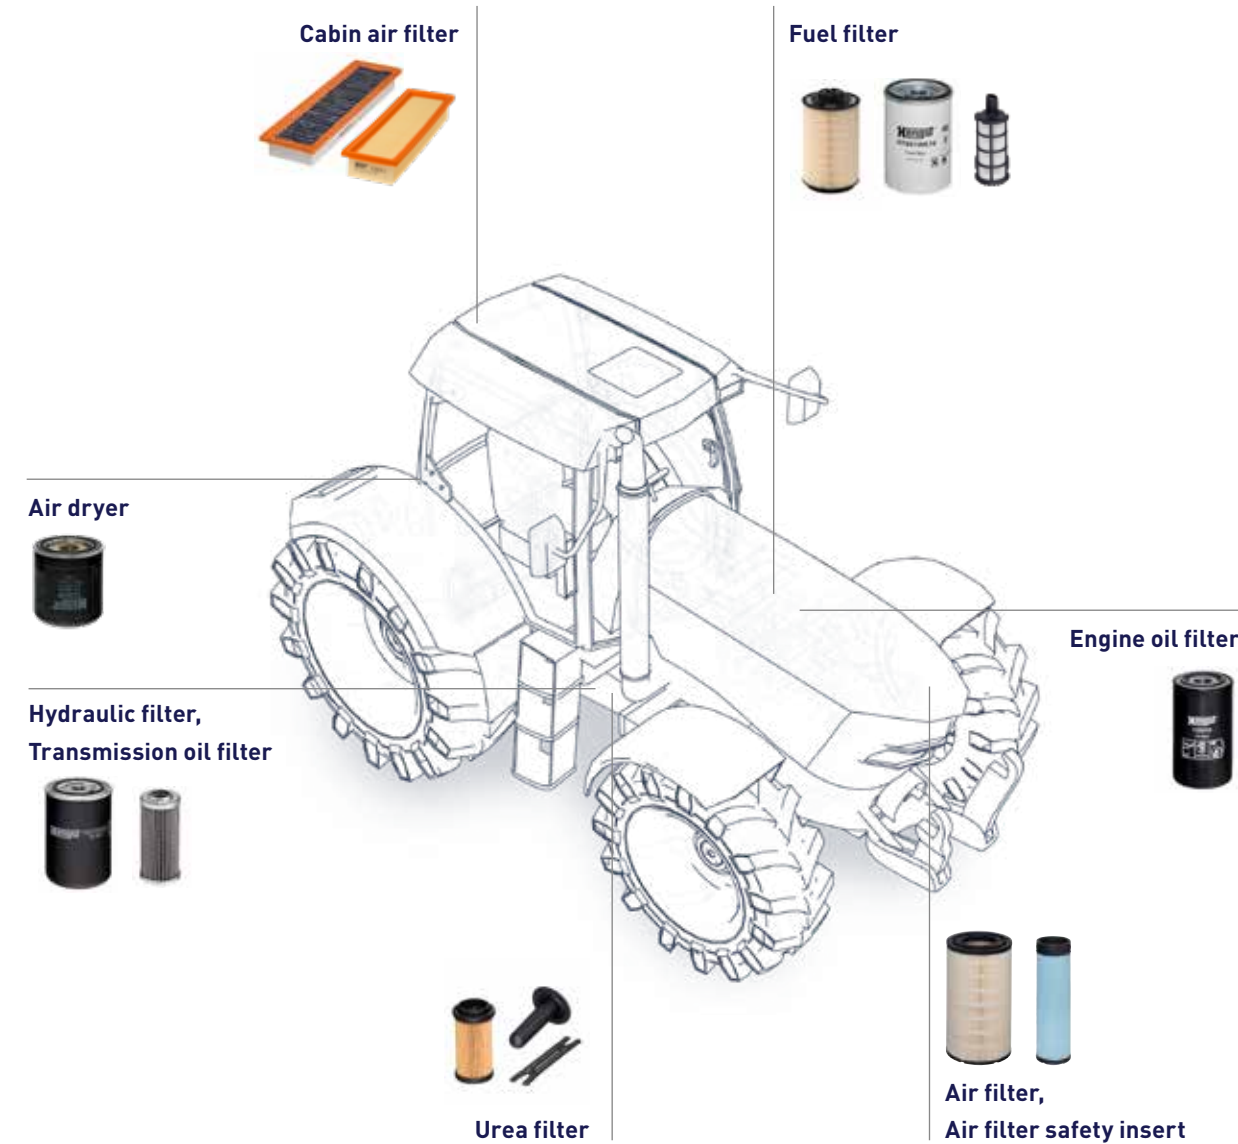

Special applications – Air dryers, urea filters, etc.

Ever stricter emission standards such as those applying to Tier V-equipped engines increasingly call for special applications such as urea filters. Our range of off-highway products offers customers matching filtration solutions such as air dryers, urea filters, and more with the quality they have come to expect from Hengst.

Simply stronger. Filters for agricultural and construction machinery.

Used on fields or at construction site, agricultural and construction machines are subjected to operating conditions that are particularly harsh. Investing in premium filters from a smart partner pays dividends as they keep the engine and the hydraulic system of the machine safe from such

external influences as sand and dust or from wear caused inside the system and help the vehicle operate at peak performance. Hengst offers filtration solutions across all performance classes and emission standards thanks to a constantly growing product portfolio for agricultural and construction machinery.
